

SUSTAINABILITY

At Restore, we prioritise minimising our environmental footprint and continuously challenge approaches to enhance our sustainability initiatives.

SUPPLIERS

From sourcing meat to acquiring dairy products, we actively seek out suppliers who share our commitment to sustainability. We ensure that our suppliers prioritise environmental responsibility by implementing practices such as using recyclable packaging, adopting improved farming methods, and maintaining transparency throughout their supply chains.

REDUCING WASTE

At Restore, we understand that having a streamlined menu can lead to increased energy efficiency in our cooking processes and a reduction in waste. By offering fewer menu items, we can purchase ingredients in larger quantities, which helps minimise overall packaging waste. We also offer surplus food from our cafe and catering operations at the end of each day. We package it in grab-and-go bags, which can be purchased via Too Good to Go.

CONSERVING ENERGY

When it comes to electricity, we are diligent about switching off unnecessary lights and machines at night to eliminate standby power consumption. We utilise sensor lights in restrooms and ensure that our refrigeration, freezing, and brewing equipment are energy-efficient.

We also work with NippyChecks - Bristol's fully electric, eco-efficient and trackable mobile plumbing and heating service. Designed in Oxfordshire by EAV Ltd, the bikes can carry 150kg of cargo, with a range of 40 miles and a top speed of 15mph. They're made from recyclable and sustainably sourced materials. They can ride in bike lanes. And, of course, they have zero emissions.

PACKAGING

We take pride in using biodegradable and home compostable food packaging, such as the eco-friendly brand Vegware, which is derived from plants., wherever possible. We actively encourage our customers to participate in sustainable practices by bringing their own reusable containers for counter goods and coffee cups for drinks.

ECOLOGI PARTNERSHIP

At Restore, we have established a partnership with Ecologi to advance our commitment to environmental sustainability through planting trees. Through this collaboration, we actively contribute to initiatives that have a positive impact on the planet. By joining forces, we aim to maximize our efforts in reducing our carbon footprint and creating a greener future. Pick up one of our loyalty cards, download Magic Stamp, or place a catering order to start contributing to our tree planting initiative. You can see our growing forest [here](#).

REPURPOSING

At Restore, we believe in infusing our business with a touch of creativity and uniqueness while staying committed to sustainability. We seize the opportunity to extend our dedication to eco-friendly practices to every aspect of our establishment, even our furniture! By opting for recycled or salvaged tables and chairs, we contribute to the reuse and repurposing of materials. Some of our furniture has even been up-cycled from our original Restaurant which opened in 2014!
